Rotomech Website Admin Panel Guide

How to update the website safely — step by step

This guide explains how to change the content of rotomech.qa using the admin panel: text, images, partners, products, clients and job openings. It also explains how your changes go live and how to avoid mistakes that affect the public website.

Admin panel login: www.rotomech.qa/admin/login

> **The one thing to remember**
> Saving a change does **not** put it on the public website. Changes go live only after someone clicks **Publish Changes**, and then take a few minutes to appear. See How changes go live.

Prepared by Melvin Prince · October 2026

1. Quick links

Every link below is clickable. The admin pages ask you to log in first if you are not already logged in.

Admin page	What you can change there	Matching public page
Admin login	Log in to the admin panel	
Dashboard	Choose which page to edit; the **Publish Changes** button is at the top	Website home
Edit Homepage	Banner, company overview, director message, call-to-action, partner logos, client logos, SEO	Home
Edit About Us	Banner, director and team photos, About text and images, mission, vision, values, why choose us, SEO	About Us
Edit Products & Partners	Partners (name, logo, description, product images), procurement partner logos, banner, SEO	Products & Partners
Edit Contact	Banner, call-to-action, map location, images, SEO	Contact Us
Edit Careers	Job openings, the “no jobs” message, banner, SEO	Careers

2. How changes go live

The admin panel works with a **draft copy** of the website. Every change you make is saved to that draft straight away. The public website only changes when the draft is published.

1. Save
Edit text or images. Each change is saved to the draft immediately.

2. Publish
Click **Publish Changes** (top right of every admin page).

3. Wait
The website rebuilds. Changes appear in about 2–5 minutes.

- **Publish sends everything.** It publishes every saved change from every admin user, not only yours.
- **There is no undo button.** A deleted partner, client, job or image is removed from the draft at once. If you delete something by mistake, do not publish; contact the developer, who can restore it (see Getting help).
- **Don’t test on the real website.** Anything you add “just to try” will go live with the next publish. See Safety rules.

3. Logging in

1. Open www.rotomech.qa/admin/login.
2. Enter the username and password given to you, then click **Login**.
3. You arrive at the Dashboard. Click a card (for example **Edit Homepage**) to open that editor.

- You stay logged in on that browser for 7 days. There is no log-out button, so on a shared or public computer use a private (incognito) window and close it when you finish.
- Never share your password by email or chat. Ask the developer for your own login instead.
- Use the back arrow next to **Admin Dashboard** to return to the previous page.

4. Editing basics

All editors work the same way:

To do this	Do this
Change a piece of text	Click the pencil icon ✎ next to the text, type the new text, then click **Save Changes** (or **Save**). Click **Cancel** to leave it unchanged.
Replace an image	Click **Upload New Image** or **Update Image**, choose a .webp file and click upload.
Change an image's alt text	Alt text is the short description read out to visually-impaired visitors and used by Google. Edit it in the image's **Alt Text** column.
Delete something	Click **Delete** and confirm. This takes effect in the draft immediately.
Edit search-engine text (SEO)	Each editor ends with **SEO Settings**: the page title, description and keywords shown by Google. Keep the title under about 60 characters and the description under about 160.

> **Wait for the green message**
> After each save or upload, wait for the green success message before doing anything else. A red message means the change was **not** saved; read it, fix the problem and try again.

5. Preparing images

- **Format: .webp only.** The admin panel rejects .jpg and .png files. (The director and team photos on the About Us page are the one exception: they accept any image type.)
- **Converting to .webp:** open squoosh.app (a free Google tool that works in your browser), drop the image in, choose **WebP** as the format on the right and click download.
- **Size:** keep each image under 1 MB. One upload can be at most about 4 MB in total, so when adding a partner, the logo plus all product images together must stay under 4 MB.
- **Logos:** use a transparent or white background and a wide shape (about 600 × 300 pixels).
- **Banners:** use a wide landscape image, about 1920 pixels wide.
- **File names:** use plain letters, numbers and dashes, e.g. *pump-skid-1.webp*.

6. Homepage editor

Open: www.rotomech.qa/admin/home · Public page: www.rotomech.qa/

Section	What you can do
Banner Section	Change the headline and sub-line; **Upload New Image** replaces the banner (enter an image name and alt text).
Company Overview	Edit the overview paragraph; replace any of the five overview images with **Update Image** and edit their alt text.
Director Message	Edit the heading, quote and author name.
CTA	Edit the "Ready to Elevate Your Operations?" heading and text.

Section	What you can do
Our Partners	The partner logos shown on the homepage. They are linked to the partners on the Products & Partners page, so it is easiest to add and delete partners there (see section 8).
Our Clients	**Add Client**: enter the client name, choose the type (**Energy** or **Infrastructure**) and upload the logo. **Delete** removes a client logo.
SEO Settings	Homepage title, description and keywords for Google.

7. About Us editor

Open: www.rotomech.qa/admin/about · Public page: www.rotomech.qa/about-us

Section	What you can do
Banner Section	Change the headline, sub-line and banner image.
Team Info	Edit the director's name and title; **Replace Director Image** and **Replace Team Image** change the photos.
About Us	Edit the text and replace the images with **Update Image**.
Mission, Vision, Core Values, Why Choose Us	Edit each heading and paragraph with the pencil icon ✎.
CTA	Edit the call-to-action heading and text.
SEO Settings	About page title, description and keywords.

8. Products & Partners editor

Open: www.rotomech.qa/admin/products-partners · Public page: www.rotomech.qa/products-and-partners

Each partner has a name, a logo, a description and product images. A partner appears in three places: the partner showcase and the Product Information tabs on the Products & Partners page, and the partner logo strip on the homepage.

Add a partner

1. Prepare the logo and at least one product image as .webp files (under 4 MB in total).
2. Click **Add Partner**.
3. Enter the partner **Name** and **Description**.
4. Click **Click to upload logo** and choose the logo.
5. Click **Click to select product images** and choose one or more product images (hold Ctrl to pick several).
6. Click **Submit** and wait for **Partner added**. Then publish.

Two partners cannot have the same name. If you get "A partner named … already exists", the partner was probably added already, for example by a double click.

Edit a partner

- Name or description: click the pencil icon ✎, edit, and click **Save**.
- Add a product image: **Add Product Image** on that partner's card.
- Remove a product image: **Delete Image** on the image.

- Change the logo: there is no replace-logo button. Add the partner again with the new logo, then delete the old entry.

Replace or delete a partner

- **Delete Partner** removes the partner, its logo and its product images.
- **The last partner can't be deleted.** The website always keeps at least one partner. To replace the only partner, add the new partner first, then delete the old one.
- When replacing a partner, **add the new one before deleting the old one**, so the page is never left empty.

Procurement partners

Add Logo uploads a procurement partner logo (.webp). **Delete** on a logo removes it. These logos scroll in the "Procurement Partners" strip on the Products & Partners page.

9. Contact editor

Open: www.rotomech.qa/admin/contact · Public page: www.rotomech.qa/contact-us

Section	What you can do
Banner Section	Change the headline, sub-line and **Upload New Banner Image**.
CTA Section	Edit the call-to-action text.
Location	Change the map shown on the page (steps below). A preview of the map is shown underneath.
Images	Replace images with **Update Image**.
SEO Settings	Contact page title, description and keywords.

Changing the map location

1. Open Google Maps and search for the office.
2. Click **Share**, then the **Embed a map** tab.
3. Click **Copy HTML**. Paste it into Notepad and copy only the address inside *src*="…". It starts with *https://www.google.com/maps/embed?*
4. In the **Location** section click the pencil icon ✎, paste that address and click **Save Changes**.

Google's help page: Share or embed a map. A normal Maps link (maps.app.goo.gl/…) will be rejected with "Please input a valid Google Maps embed link".

The office address shown in the website footer is not in the admin panel. Ask the developer to change it.

10. Careers editor

Open: www.rotomech.qa/admin/careers · Public page: www.rotomech.qa/careers

Add a job opening

1. Click **Add New Career**.
2. Fill in **Position** and **Location** (both required) and the **Description**.
3. For **Key Responsibilities**, **Qualifications** and **What We Offer**, separate the points with commas. Each comma starts a new bullet point on the website, so don't use commas inside a single point.

4. **Created At** is the posting date (MM/DD/YYYY).
5. Click **Save Career**, then publish.

- **Edit** on a job opens the same form; **Delete** removes the job.
- **No Jobs Message** is the text visitors see when there are no openings.
- Applications from the Careers page are emailed to the company inbox with a link to the applicant's CV.

11. Publishing your changes

1. Finish all your edits and check that each one showed a green success message.
2. Click **Publish Changes** at the top right of any admin page.
3. Wait for **Publish successful! Changes will be live in a few minutes.**
4. After about 5 minutes, open the public page (for example www.rotomech.qa/products-and-partners) and press **Ctrl + F5** (or **Cmd + Shift + R** on a Mac) to reload it without old copies.

> **If the website still hasn't changed after 10 minutes**
> The website rebuild may have failed. The public site then keeps showing the last good version, so visitors still see a working site. Please don't keep deleting and re-adding content to fix it: contact the developer (see Getting help) and say what you changed.

12. Safety rules

Do

- ✓ Prepare images as .webp under 1 MB before you start.
- ✓ Add a replacement before deleting an old partner, client or image.
- ✓ Wait for the green message after every action.
- ✓ Publish once, after all your edits are done.
- ✓ Check the public page after publishing.
- ✓ Tell the developer straight away if you delete something by mistake, before publishing.

Don't

- ✗ Add test partners, jobs or clients ("test", "abc"…). They go live with the next publish.
- ✗ Delete all partners to start again. Edit or replace them instead.
- ✗ Click Submit or Publish twice while it is still working.
- ✗ Upload .jpg/.png files renamed to .webp. Convert them properly.
- ✗ Edit the same page at the same time as a colleague.
- ✗ Share your login with others.

Need to practise? Ask the developer for a test copy of the website instead of trying things on the real one.

13. Troubleshooting

Problem or message	What it means and what to do
“Only .webp allowed”	The file is not a WebP image. Convert it with squoosh.app.
Upload hangs or fails with a large file	The upload is over about 4 MB. Compress the images (in Squoosh, lower the quality slider) and try again.
“A partner named … already exists”	That partner is already in the list. Refresh the page to see it.
“This is the last partner and can’t be deleted”	Add the new partner first, then delete this one.
“Please input a valid Google Maps embed link”	Use the embed address, not a normal Maps link. See Changing the map location.
“Position and location are required”	Fill in both fields in the job form.
Red error mentioning GitHub	The change was not saved. Refresh the page and try once more. If it happens again, contact the developer.
You are sent back to the login page	Your login has expired. Log in again; changes you saved before are kept.
“Something went wrong” screen	Click **Try again** or refresh the page. Saved changes are not lost.
Published, but the website hasn’t changed	Wait 5 minutes and press Ctrl + F5. If it’s still unchanged after 10 minutes, contact the developer.

14. Getting help

Contact the website developer for anything the admin panel can’t do, or if something goes wrong:

- Restoring something deleted by mistake (every change is recorded, so it can be recovered).
- Changing the footer, the menu, contact form settings or the site layout.
- Creating or removing admin logins.
- A publish that doesn’t appear on the website.

When you report a problem, include the admin page you were on, what you clicked, the exact message shown and roughly what time it happened. A screenshot helps.
